## NetJapan Service Pack 1 is a big step for backup and restore procedures

NetJapan (www.netjapan.eu), publisher of disk imaging backup, system disaster recovery, and virtualization software solutions announces the availability of Service Pack 1 for its ActiVImage Protector range, a significant update to its flagship backup product line.

This Service Pack 1 includes not only support for Windows 2016 but also enhanced features that directly benefit businesses using ActiVImage Protector software and organisations trying to improve backup time, restore time and reduce backup storage space.

With the rise of hybrid environments, more organisations run their business applications in a mixture of physical, virtual and cloud environments. With Service Pack 1, NetJapan speeds up backup and onsite/offsite recovery procedures across any physical and virtual platforms from Windows Server 2008/Vista to the latest Windows Server 2016/10. It also reduces the size of backup with its enhanced deduplication on-the-fly resulting in lower required storage space on and offsite.

“We have deliberately invested an intensive period of testing Service Pack 1 to meet the needs of as many customers as possible and in terms of performance for each supported platform. Our most experienced customers already have Service Pack 1 and are 100% satisfied” said Richard Zinner, EMEA CTO.

The Service Pack 1 for Windows is released today and its Linux equivalent is going to be available in the coming weeks so companies can benefit of fast backup, restore and instant disaster recovery independently from the type of environment or platforms they are using.

Furthermore, NetJapan improves its free add-on ImageBoot installer - it allows to boot a Virtual Machine from a full or incremental backup file in only 2 minutes - by adding support for the latest Oracle VirtualBox, Hyper-V Server 2016 and VMware Workstation Pro / Player 12. ImageBoot can be used to test the recoverability of a backup chain, to create a test environment or to boot a VM as failover in case of emergency. With the increasing number of threats, companies have been using this instant availability options more and more, it's available for free with ActiVImage Protector.

Service Pack 1 includes:

- Windows Server 2016 Support.
- Enhanced Network Client Management Console.
- Enhanced incremental Tracking Driver.
- Enhanced Inline Data Deduplication Compression.
- Enhanced ImageBoot with additional support for:
  - Oracle VirtualBox
  - Hyper-V Server 2016
  - VMware Workstation Pro / Player 12 & 12.5
  - Persistent profile feature
- Fixes
