

ActiveImageTM PROTECTOR VIRTUAL

ActiveImage Protector Virtual **HyperAgentTM** backups your virtual infrastructures without the need to install backup software on either the host or guest machines.

Backup & Recovery for virtual environments

Deduplication across VMs reduces storage space of 80%

VMs are restored in 2 only minutes

Proactive protection against CryptoLocker ransomware

Multiple backup scheduling for higher flexibility

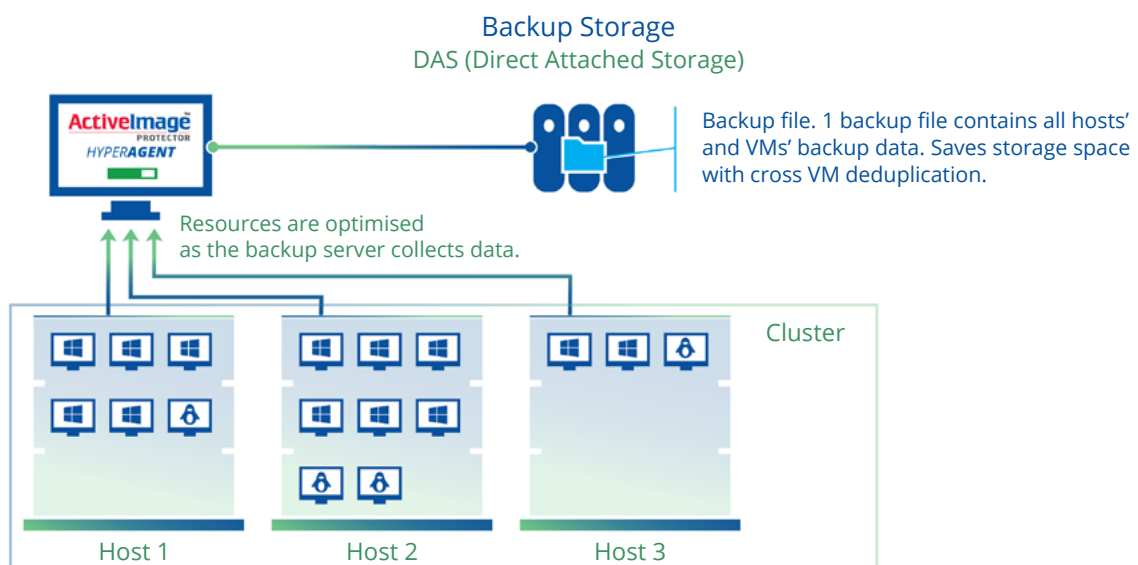

Automated live tests of backup file "bootability"

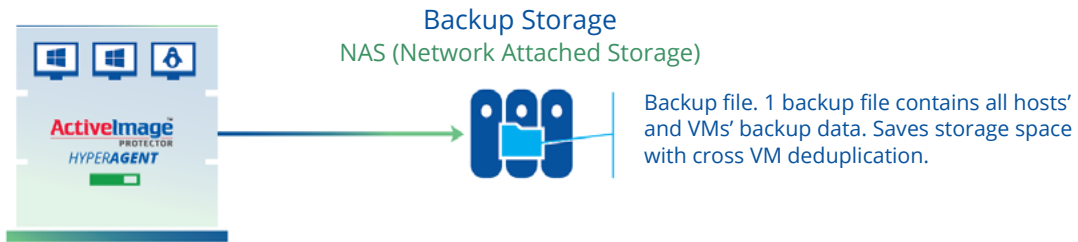

Centralised management console for all agentless & agent-based backups

- Simple file recovery in 3 clicks.
- Use backups as an iSCSI disk for flexible, universal, fast and reliable restore!
- Very low consumption of host and guest resources with agentless backups.
- Choose to use it agentless or agent-based:
 - Agentless for VMware ESXi & Microsoft Hyper-V. Agent-based for all virtual environments.
- Supports Windows and Linux guest machines.

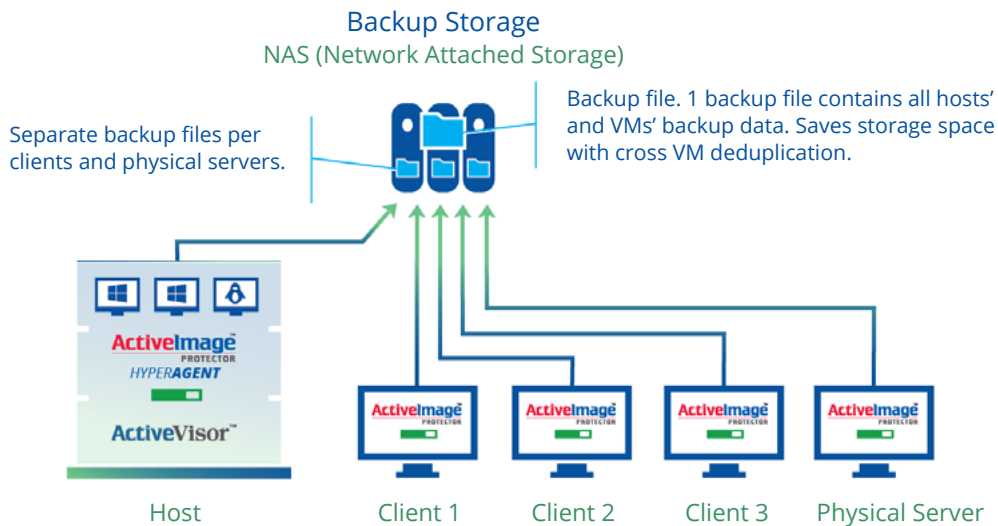

Agentless for VMware ESXi & Microsoft Hyper-V

Agentless for VMware ESXi & Microsoft Hyper-V

Agentless & Agent-based
